

DID YOU KNOW THIS?

EMOLLIENTS

**SUPERB TEAT CONDITION
Equals
HAPPY, HIGH PERFORMING COWS**

Emolllients are teat conditioning and repair additives. All teatspray programs are improved by the inclusion of emolllients because teat condition is an important factor in **minimising new mastitis infections**.

AGMAX HAS THREE EMOLLIENTS TO CHOOSE FROM:

1. **Glycerine** – proven maximum protection for harsh conditions

2. **Titivate** – Agmax's popular premium quality emollient, containing sorbitol, glycerine, aloe vera and moisturiser

Titivate has proven to be a real winner, especially when used in conjunction with our flagship teatspray product Teatsweet. Titivate is a high performance emollient for superior teat conditioning. It is based on a blend of glycerine and sorbitol and utilises Aloe Vera to promote healing of damaged/cracked teat tissue. Titivate has proven extremely popular with our customers because of its ability to work in poor weather conditions and with problem teat tissue.

3. **Sorbitol** – Low cost alternative emollient

HOW MUCH EMOLLIENT SHOULD I USE?

1. At the start of the season, add 2 litres of Titivate or Glycerine emollient in a 20 litre mix.
2. In severe weather (cold/wet/windy) or when teats are in bad condition you can add as much as 20% emollient (eg 4 litres in a 20 litre container)
3. Once summer arrives and teats are in good condition, you can reduce emollient content.
