

DID YOU KNOW THIS? *Agmax Iodine Teatspray?....*

Used for the control of Mastitis-producing organisms on the teat.

Features

- Licensed under the Animal Remedies Act 1967.
- Effective control of mastitis and minimises the risk of new infections.
- Contains 2% Iodine.
- Standard use rate 1:9.
- High Risk conditions (wet weather, cracked teats) Use Rate 1:4.
- Brown viscose liquid.
- Contains 26% emollient.
- ✓ Passed NZ Teat Sanitiser Protocol A Test

Benefits

- Approved teatspray – passed all regulatory requirements.
- Combats mastitis spread in the herd and aids in the healing of black pox sores and damaged teats.
- Formulated to achieve an active iodine content which is 10% higher than the label claim.
- Provides a generous buffer to allow for dilution inaccuracies.
- At 9:1 dilution rate, a 20lt container makes up to 200 litres of “ready to use”.
- Provides good sticking power to ensure maximum teat protection in severe conditions.
- Easily identified on sprayed teats.
- Built-in emollient system provides excellent teat repair and protection characteristics.
